Changing dimensions in Layout from black to colors. [KN128]
How can I create my dimensions in layout in colors instead of black?

Up until a few releases ago, you could make dimensions in your layout in any desired color. Now they automatically appear in black. How can you over-ride this?

Just click on the DETAIL OPTIONS Icon.

Under formatting select Text and then remove the check from the Color Option in the Dialog Box that appears.

You will see several additional Color Formatting Options that control the color of arrows, witness lines, etc.

There is also an equivalent setting for annotations. You will now create annotations and dimensions with the current active construction color.

To modify the color of only selected dimensions or annotations on a drawing, do the same thing but use the DETAIL CHANGE Icon.
